# CSV Merger & File Splitting Automation

PROJECT EVIDENCE REPORT | PERSONAL DEMONSTRATION | SYNTHETIC DATA

**Important disclosure:** This work is a personal reproducible sample, not a paid client project. Data is fictional and metrics describe only the bundled sample run.

## Verified sample output

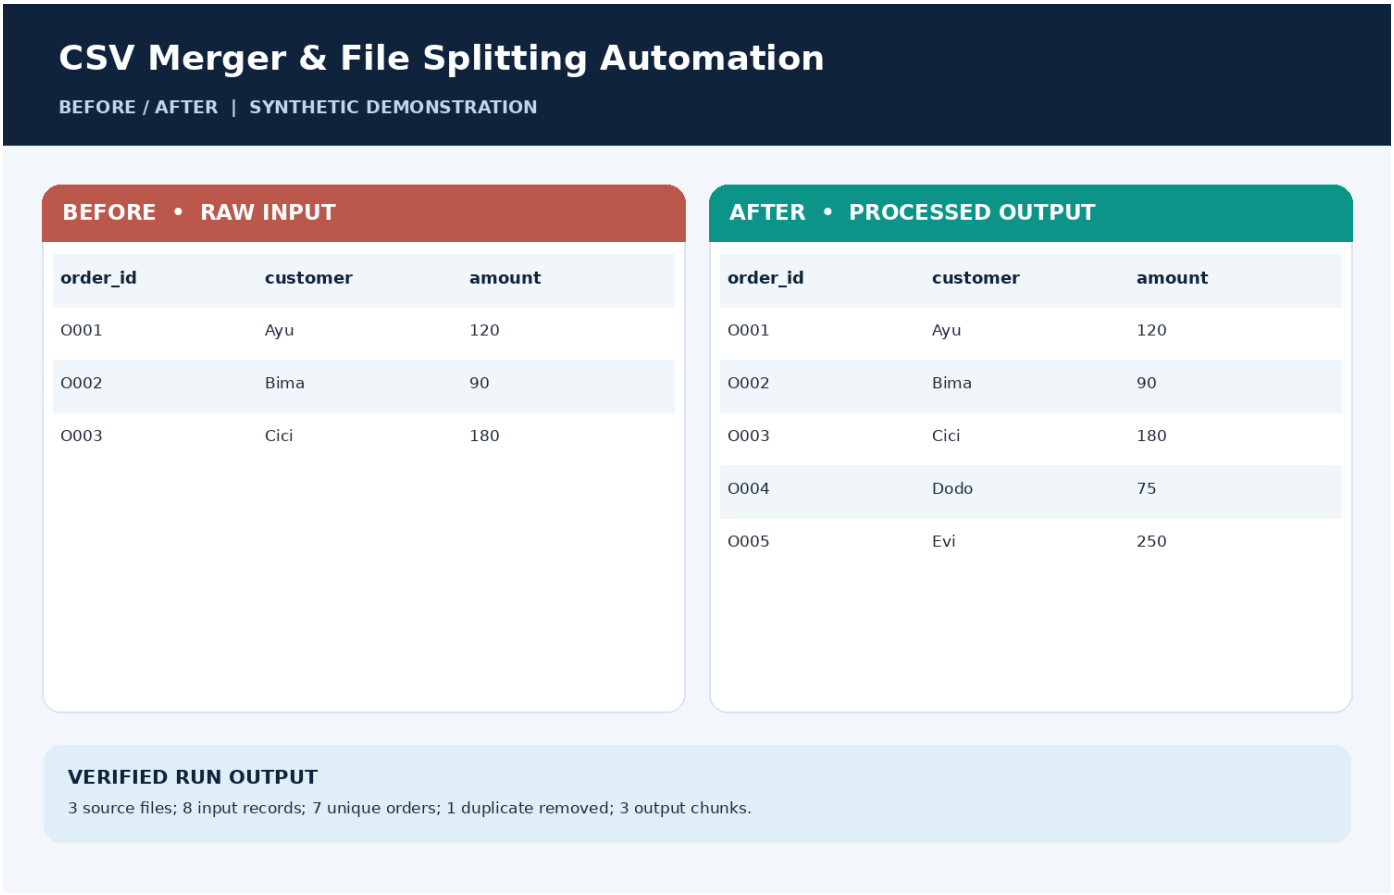
3 source files; 8 input records; 7 unique orders; 1 duplicate removed; 3 output chunks.

**Method:** Execute `python process.py` inside the project folder. Outputs are saved in the `output/` directory.

**Data-quality scope:** Repeated order ID across input files

**Deliverables:** Merged CSV plus three CSV chunks

**Repository name:** csv-merger-splitter



The screenshot above is generated from the actual sample input and output files, not captured from a client environment.
